

## **DANIEL DOMÍNGUEZ LEIRA**

2° - DAW - DESP

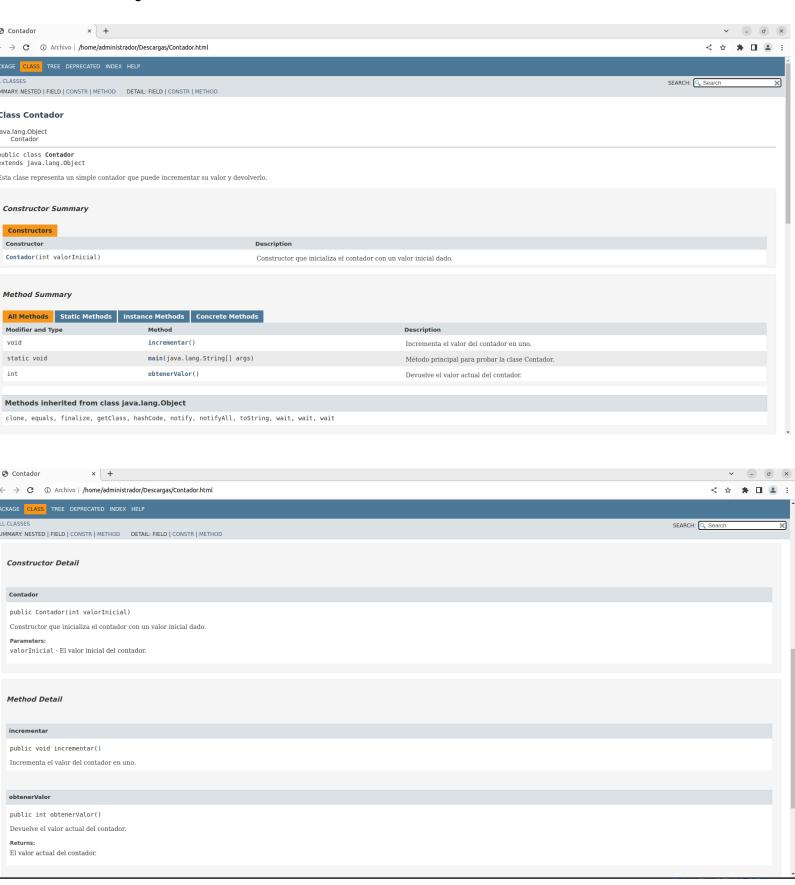

Con java instalado, creo este programa en java que es un contador.

Luego en la terminal yendo a la ubicación del archivo hice

javadoc sumar.java

```
administrador@UBUNTUDAW:~/Descargas$ javadoc Contador.java
Loading source file Contador.java...
Constructing Javadoc information...
Standard Doclet version 11.0.22
Building tree for all the packages and classes...
Generating ./Contador.html...
Generating ./package-summary.html...
Generating ./package-tree.html...
Generating ./constant-values.html...
Building index for all the packages and classes...
Generating ./overview-tree.html...
Generating ./index-all.html...
Building index for all classes...
Generating ./allclasses-index.html...
Generating ./allpackages-index.html...
Generating ./deprecated-list.html...
Building index for all classes...
Generating ./allclasses.html...
Generating ./allclasses.html...
Generating ./index.html...
Generating ./help-doc.html...
administrador@UBUNTUDAW:~/Descargas$
```

## Y me genera el index.html

## main

public static void main(java.lang.String[] args)

Método principal para probar la clase Contador.

Parameters:
args - Los argumentos de la línea de comandos (no se utilizan en este ejemplo).
